

Reference Project

Industrial Coating

Nationwide Silo Repainting

Location Cement silos and buildings nationwide

Date 2002

Client Holcim Cement

In 2002, parent company Holcim made the choice to eliminate the Milburn brand and needed to repaint facilities across NZ.

Abseil Access Ltd was contracted to remove all the existing Milburn logos and replace them with the new 3 colours Holcim super graphic. This nationwide project involved 17 logos across 9 sites, on steel and concrete silos up to 40m high.

Resene paints were chosen for the project and supplied UV stabilised epoxy acrylics compatible with the variety of existing coatings encountered. Many of the sites required a full white undercoating before the graphics could be applied. Three teams of signwriting abseilers were required to complete the project within the time frame
